---

wireless antenna forming a wireless communication system is installed on a building or an outer wall of a house. In the outdoor wireless antenna, a direction of a main beam is determined so as to be fixed. For example, Japanese Unexamined Patent Application Publication No. 2009-196389 (JP-2009-196389A) discloses an electric wave learning device capable of changing in advance a direction of main beam. According to JP-2009-196389A, when the learning of a wireless electric wave is ended, the direction of main beam is changed to the

---

original direction. is because in the real world where we live human beings have made physical and mental properties. thus things that happen in physical reality take time and usually we perceive things differently, in real time, our brain needs a few milliseconds to process what happened and to update on the result of some complicated logic, which results in things such as fluid dynamics, reasoning (yes, your brain has a lot of mental powers), etc. none of this is limited to neurons, it is widespread throughout the human brain, including memories, which

---

can be stored and retrieved when we need. these are just some of the things that do not rely on a motor system. Anyway, if you want to look at a more complex example of autonomy, I suggest reading the paper entitled A Brain-Computer Interface based on Direct Neural Recording. It's a good read, the author has given us an interesting insight of how human beings do their thinking, particularly in autonomy. I'll just point out a few things here, and I'll post the whole paper soon for more info. The brain is a complex system, and uses many different
